CLAIMS

What is claimed is:

- 1. An integrated and self contained diesel hydraulic thruster system integral with a dynamic positioning control system for dynamic positioning of any waterborne vessel having a hull with at least two sides and a deck connecting the sides, comprising:
 - a. at least two azimuthing thrusters, each removably mounted to the vessel, comprising:
 - i. a skid removably secured to the deck;
 - ii. an upper thruster housing, removably connected to the skid, containing steering gear with hydraulic slewing drive and electrical steering angle feedback sensors and a multi-port hydraulic swivel assembly;
 - iii. a stem moveably connected with a connector to the skid;
 - iv. a strut connected to the stem;
 - v. a hydraulic pod connected to the strut; wherein the pod comprises a housing a hydraulic motor contained within the housing;
 - vi. a drive shaft connected to the hydraulic motor on one end;
 - vii. at least one propeller with nozzle connected to the drive shaft; and
 - viii. a bundle of stem hydraulic hoses connecting on one end to the multi-port hydraulic swivel assembly and on the other end to the hydraulic motor;
 - b. at least two self-contained diesel hydraulic power units removably secured to the deck, one for each thruster, comprising:
 - i. a housing comprising a diesel engine with a fuel day tank, wherein the diesel engine is connected to a hydraulic pump with a hydraulic reservoir

and a hydraulic cooler;

- ii. a cooling system for the engine;
- iii. an exhaust system for the engine;
- iv. an alternator for the engine;

- v. an electrical control system for the engine;
- vi. an electric starter for the engine;
- vii. a battery for the engine; and
- viii. a bundle of hydraulic hoses and an electrical control cable, each having a first and second end, wherein each the first ends are secured to the hydraulic power unit and the other ends are secured to the thruster skid;
- c. at least one dynamic positioning computer connected to each of the self contained diesel hydraulic power units;
- d. at least one motion reference sensor connected to the dynamic positioning computer to correct reference position signals for motion of the vessel;
- e. at least one heading sensor; and
 - f. at least one sensor selected from the group consisting of position reference sensors connected to the dynamic positioning computer; environmental sensors connected to the dynamic positioning computer; and combinations thereof.
- The system of claim 1, wherein one or more hydraulic cylinders at the connector are used to tilt the stem upwards to a stowed position of the thruster, whereby the thruster is completely out of the water.
 - 3. The system of claim 1, wherein the position reference sensors are selected from the group consisting of global positioning system (GPS) sensors; hydro-acoustic sensors; fan beam

laser sensors; Artimis system signal sensors; vertical taut wire system sensors, horizontal taut wire system sensors; and differential and absolute reference positioning system (DARPS) sensors.

- 4. The system of claim 1, wherein the environmental sensors are selected from the group consisting of wind sensors, current sensor and combinations thereof.
 - 5. The system of claim 1, wherein the dynamic positioning computer further comprises at least one uninterruptible power source connected to the computer.
 - 6. The system of claim 1, wherein the diesel engine ranges from about 150 horsepower to about 1000 horsepower.
- 10 7. The system of claim 1, wherein the motor is a variable speed hydraulic motor.
 - 8. The system of claim 1, wherein the motor is reversible.
 - 9. The system of claim 1, wherein the connector is a hinge.
 - 10. The system of claim 1, wherein the stem is bolted to the skid.
- The system of claim 1, wherein the stem further comprises at least one hydraulic cylinder connected to the stem to raise or lower the stem.
 - 12. The system of claim 1, wherein the thruster is mounted to the deck of the vessel.
 - 13. The system of claim 1, wherein the thruster is mounted to the side of the hull above the water line of the vessel.
 - 14. The system of claim 1, comprising at least two thrusters.
- 20 15. A waterborne vessel comprising at least two thrusters as defined in claim 1.
